

NOVA AUTOMOTIVE

Nova E9 Performance

Vehicle specification and charging guide

Model	E9 Performance
Vehicle code	NOV-E9-22
Model year	2026
Edition	Specification 1.4

Technical information for the Nova E9 Performance. These ratings do not apply to other vehicles.

Read the identification, safety and applicability information before relying on this document.

Installation considerations	7
Technical summary	8

3. Model identification

Applicability

This document applies only to the Nova E9 Performance, code NOV-E9-22.

Different platform

The E9 charging hardware, limits and software are not shared with the Orion E4.

Identification

Confirm the model code on the vehicle plate before using any value in this guide.

4. AC charging

Maximum AC input

The Nova E9 Performance supports up to 22 kW AC using three-phase 400 V, 32 A per phase.

Equipment

A 22 kW session requires a vehicle, wallbox, cable and site circuit all rated for the current.

Non-transferable rating

The 22 kW figure is a Nova E9 value and must not be applied to an Orion E4 or another vehicle.

Connector	Type 2
Maximum AC power	22 kW
Supply at maximum	3-phase 400 V, 32 A/phase

5. DC charging

Connector

CCS2 direct-current charging is supported.

Peak input

Peak DC input is 210 kW under reference conditions.

Separate rating

DC peak power is unrelated to a home AC wallbox rating.

6. Battery

Usable capacity

Usable battery capacity is 91 kWh.

Charge planning

Time depends on current SoC, target, sustained power and losses.

Thermal management

The vehicle may condition the battery before rapid charging.

Usable energy	91 kWh
Recommended daily target	80%
Nominal voltage	800 V class

7. Installation considerations

Site capacity

A 22 kW wallbox normally requires 32 A per phase plus capacity for other loads.

Load management

Dynamic current control may reduce output below 22 kW.

Qualified assessment

Confirm circuit, protection and connection limits before installation.

8. Technical summary

Dataset role

This is a realistic wrong-model source included to test product-identity separation.
